Help

Read-Along Box

Pitch Slider

The pitch slider is available for default narration and custom recordings. Raise the pitch by sliding toward the right. Lower the pitch by sliding toward the left.

HINT: To restore to normal pitch, double tap on either icon to the right or the left of the pitch slider.

Information Icon

To have access to more tasks such as navigating directly back to the title page, select the information icon. This icon is available on every page.

Navigation

Use the left and right navigation buttons to navigate from page to page. To jump to any page in the book, select the information icon and use the page navigator.

Playback

Select the playback icon to start/stop the narration at any time.

Resize

Select the resize icon to move the Read Along box out of the main view. Select it again to move it back to the main view.

HINT: Select the Read Along box text to toggle the zoom.

Record

Record your own voice at anytime by selecting the record icon. Ensure that the 'Use my recording' checkbox is selected to playback the custom recording. Deselect the 'Use my recording' checkbox at anytime to restore default narration.

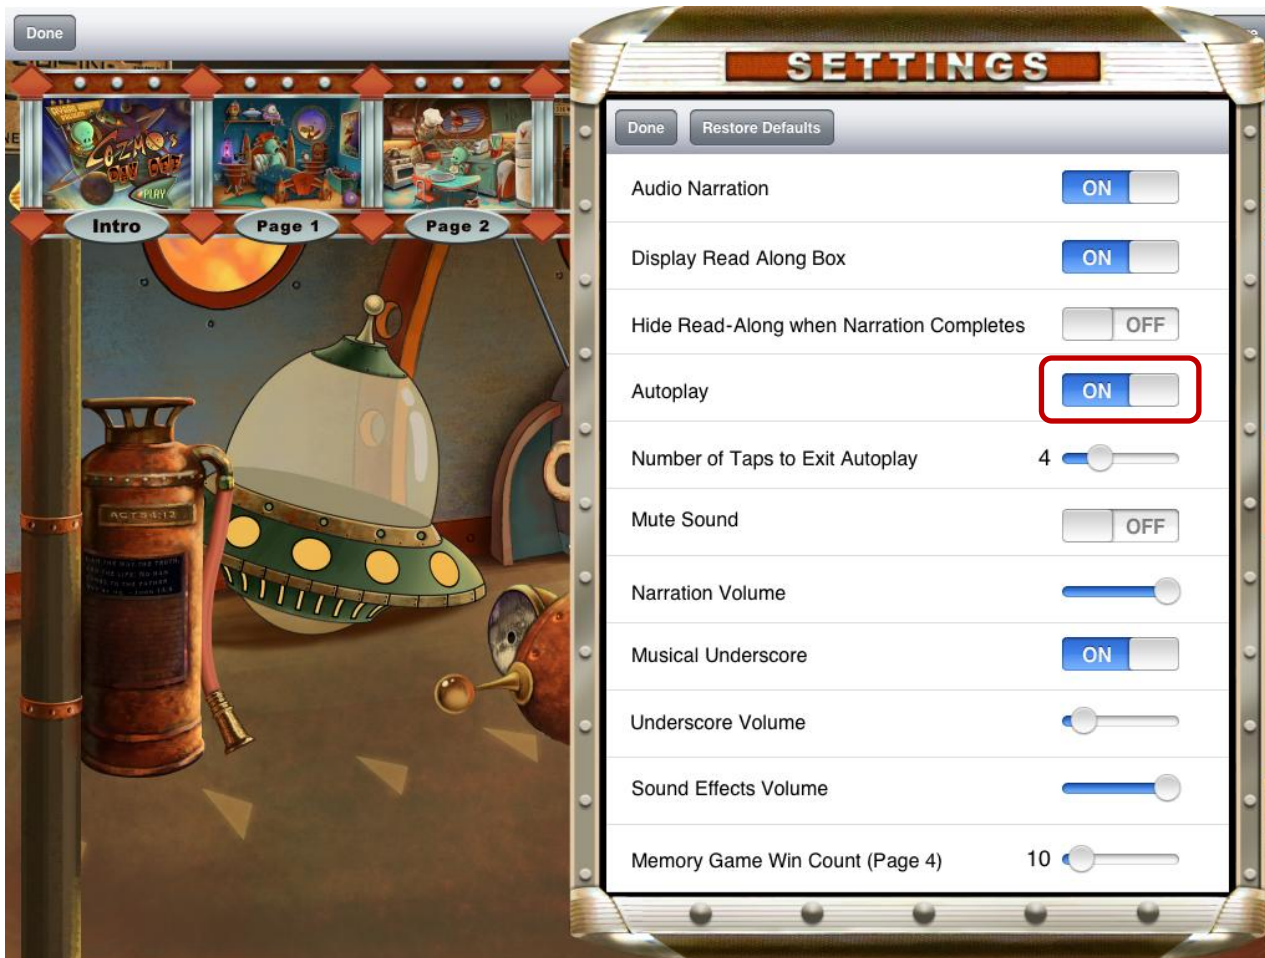

HINT: To remove the Read Along box, select the Information icon and navigate to the Settings view and turn off the Read Along box.

Autoplay

When Autoplay mode is running, each page is prevented from running interactions. If the current page is touched while in Autoplay mode, a visual prompt will display how to exit the mode. In this example, the user must initiate four consecutive two finger taps to exit Autoplay mode. The number of taps can be changed in the Settings view.

Autoplay mode is started by navigating to the Settings view and setting Autoplay to 'ON'. Optionally, Autoplay can run with narration only, or with both narration and the Read Along box. After configuring Autoplay mode, move to the previous or next page and the story will automatically run Autoplay mode with the configured settings.

Interactivity

There are over 100 unique interactions in this application! So, it's very easy to overlook some of the interactions. Without giving away all of the fun, here are hints to find many of the interactions. Yellow rectangles identify 'hot spots' for interactivity. Note that many interactions have alternating sounds or actions. As a result, you may want to touch 'hot spots' multiple times to see if you have rotated through all interactions. A few interactions may only be available when another interaction has been triggered. For instance, on page 1, the Captain Space-Shot poster may catch fire due to an interaction with another object. After the poster catches fire - you can put it out!

Note that none of the hidden dog interactivities will be identified in this section. As well, future updates may alter or add interactions.

Tilt device to move ball.

Tilt device to move the fuel gauge.

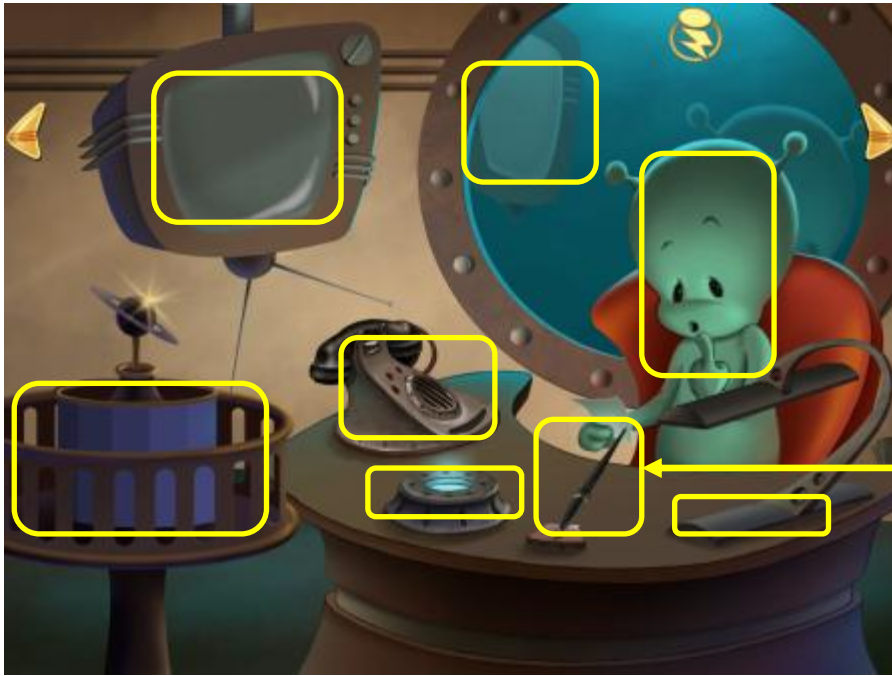

Tilt device to see more of the galaxy!

Touch flying objects to see if anything happens!

Touch pen when animation ticker is active to alternate animation sequences.

About

Ayars Animation Inc. is located in Corona, CA. We are a family-based operation that is dedicated to providing high quality family entertainment. For more information about our company, please visit us at <http://www.AyarsAnimation.com>.

For support related issues, please contact us at Support@AyarsAnimation.com.

We would love to hear from you! Send us your thoughts at Feedback@AyarsAnimation.com.
